

Part III CRL Administrator's Reference Manual

Chapter 15: *CRL's Java Properties*

CRL's Java properties are parameter-value pairs which must contain appropriate values in order for a **CRL** installation to operate correctly. Properties must be defined for database access information, for setting paths to target directories for various data and default browse paths, for turning on or off special features, and so on. The properties are contained in a file called `LogbookConfigParms.properties` which is stored under the `LogBook_admin` directory. The installation's **CRL** administrator must edit this file before **CRL** is invoked.

Chapter 16: *Introduction to XML and DTD Files*

The configuration files for the **CRL** desktop as well as for the inquiry and forms features are provided in **XML** format. In this chapter we provide the information you need in order to understand **CRL's XML** configuration files. This chapter is not intended as a general **XML** reference.

Chapter 17: *The CRL Desktop Configuration File*

In this chapter we illustrate the structure of the **CRL** desktop configuration file (in **XML**) as dictated by its embedded DTD file. We discuss each element type and its associated attributes as a unit.

Chapter 18: *Form and Inquiry Configuration Files*

The configuration files for the inquiry and forms features are provided in **XML** format. In this chapter we illustrate the structure of these configuration files.
